**[pcb@pro-cb.com](mailto:pcb@pro-cb.com)**

Gypsum board forming and manufacturing is a challenging and precise process. Forming belt that will lay flat, run straight and provide a uniform smooth surface. The gypsum board forming belt offered by Pro Belt is specifically designed for today's high speed lines and is manufactured using the proven rotor cure process which ensures a smooth, continuous flat surface.

### **SPECIALLY TREATED FABRIC**

The belt is made with 5 plies of polyester and nylon fabrics that are guaranteed to lay flat and track straight. The synthetic fibers eliminate the need for costly molded edges and allow for flexibility of belt width from 600mm wide to 1600mm wide.

### **COVER COMPOUND**

With our vast experience and expertise in polymer technologies we have developed the premier cover compound for gypsum board belts. A natural rubber based compound, it glazes significantly faster than competitive material and sands easily. It is non-marking, abrasion resistant and will resist deterioration and the effects of aging. The cover color can be gray or white.

### **Package**

The belt is packaged with wooden box to protect from any Impact during transport.
